1. Product specifications

RONDA SWISS ANALOG
QUARTZ MOVEMENT

Line	Powertech
Caliber	762E
Size	6¾ x 8'''

2. Maintenance

Watch maintenance

Like any object, your watch is negatively affected by dust, perfume, perspiration, pool and sea water. Salt crystals from the skin could attack the metal of the case and the band, the crown and leather strap.

We recommend that you clean your watch with a slightly damp, soft cloth. The metal and the gold plating will retain their original colour and lustre longer.

Metal bands on watches with a minimum water resistance of 5 atm can be washed with cold water and a mild soap.

Make sure that the crown is always pushed into place when cleaning your watch, and that the crystal is in good condition before making any contact with water. Never use hot water. Have a professional watch-repair service replace the battery. A professional watch maker knows how to check the gaskets and how to replace them, if necessary. Always explicitly ask to check the water resistance, to make sure your watch remains water resistant and to keep the warranty after a battery replacement or repair.

Strap maintenance

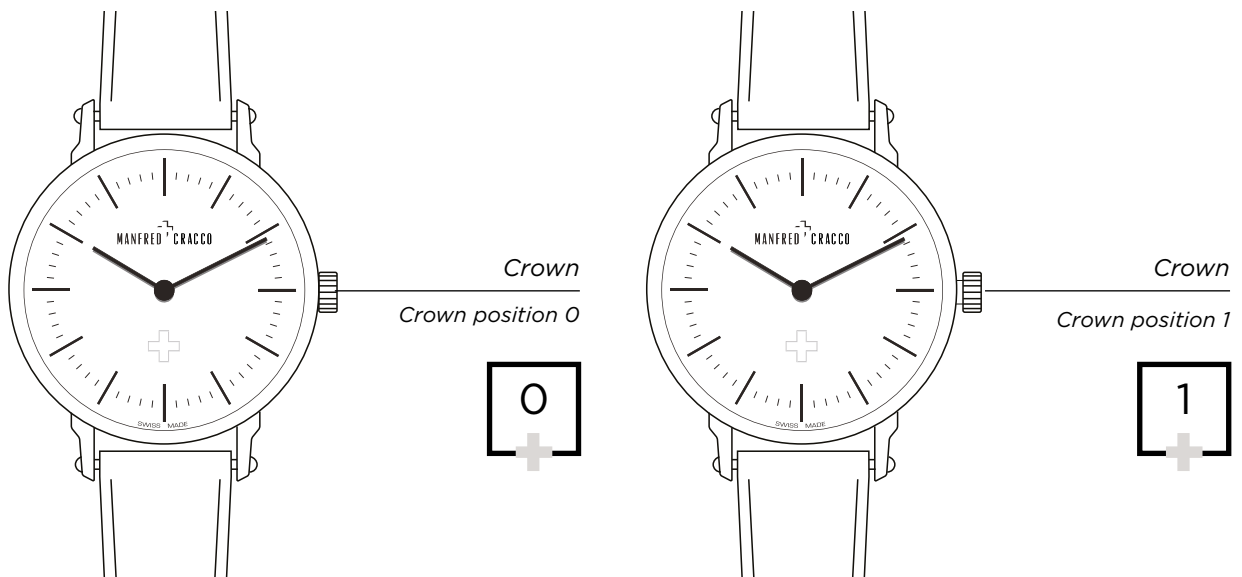

Our leather straps are manufactured of quality materials, so we recommend to handle them with care! You can clean the leather using a leather care product, but please test the product on a small part of the leather to make sure there's no adverse reaction and read the label instructions carefully. Don't use chemical products on the material.

Limit the exposure of the leather straps to heat, direct sunlight or damp environments. Note that color transfer can occur when using the product.

3. Instructions

A. Setting the time

When wearing the watch, the crown is in position 0. In this position the crown has no alteration function. This is to prevent any unintentional alterations.

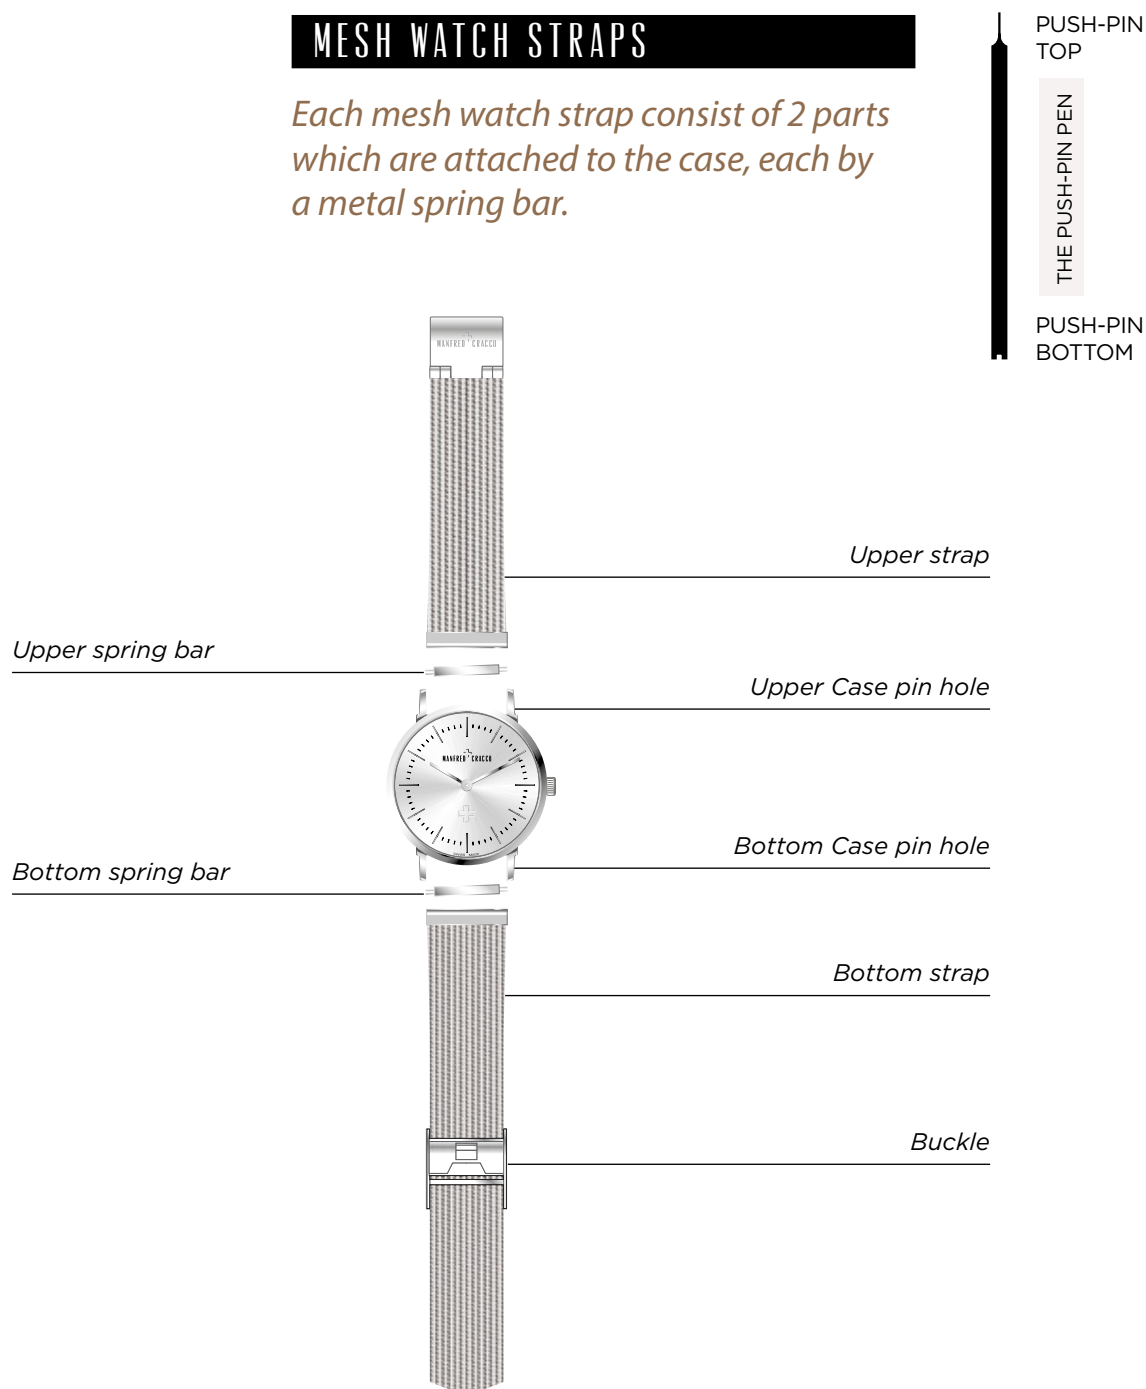

Setting the date

1. *Take off the watch*
2. *Gently pull out the crown to position 1 until you hear a soft click*
3. *In this position the crown stops the time and the time can be set exactly*
4. *Turn the crown to adjust the hour and minute hands*
5. *Gently push down the crown down to the 0 position*

3. Instructions

B. Change Watch Strap

Carefully read the instructions below.

RELEASE

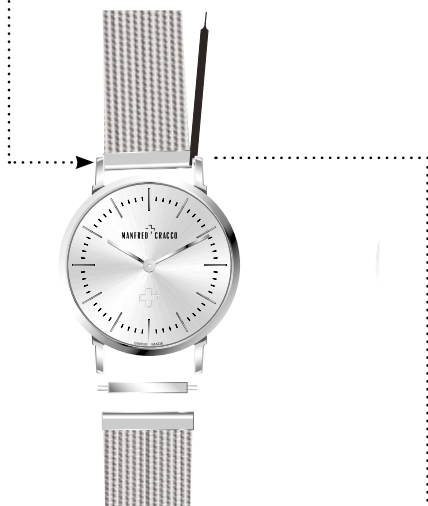

GENTLY PRESS THE PUSH-PIN
UNTIL THE SPRING BARS POP OUT

REPEAT THIS PROCESS
FOR THE BOTTOM STRAP
UNTIL FINISHED

CHANGE

GENTLY PRESS THE LEFT SIDE IN THE
LEFT PIN HOLE OPENING OF THE CASE

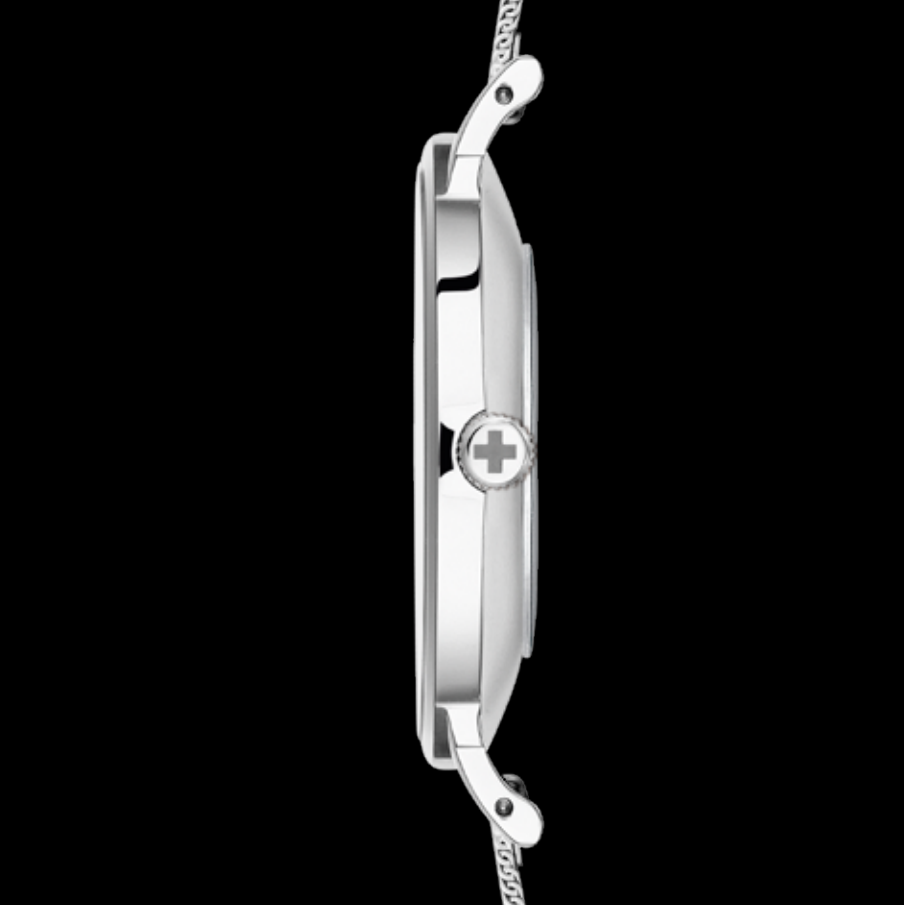

REPEAT THIS PROCESS
FOR THE BOTTOM STRAP
UNTIL FINISHED

USE THE PUSH-PIN BOTTOM AND
PLACE IT OVER THE RIGHT SIDE
OF THE SPRING BAR

Remarks:

The springbar is a tiny metal bar which can pop out and jump off when using too much force.
Keep the spring bars in a box or plastic pack in order to contain them safely (for loss) and not cause damage.
